

# Case Study

## Glaxo Smith Kline Pharmaceuticals

# GlaxoSmithKline

### Project Details

Glaxo Smith Kline is the six largest pharmaceutical company in the world. Their Australian operations in Ermington NSW were requiring an access solution between levels and the delivery of a system within a short period of time was an essential requirement.

### Installer

Walkway Systems Australia

### Products

KOMBI Two-Stage Stairs

### Challenges

With such a tight time frame a product with short delivery lead times had to be supplied so as not to hold up installation. Products also needed to be delivered in modules to enable workers to locate the stairway into the constricted area.

### Solution

Glaxo Smith Kline ordered KOMBI components "off the shelf" ensuring delivery and installation in a matter of days. KOMBI's modular design, with its easy maneuverability, and the flexibility to be adjusted on-site was a huge benefit if there were any discrepancies with site pre-measurements.
