

Case Study

Mirvac Property Group

Project Details

Mirvac is a leading Australian property group who owns and manages assets across the office, retail and industrial sectors. The project was to be carried out at St Martins Tower, located within Sydney's busy CBD district.

Sky 5

Products

KOMBI Stairs, Crossovers & Platforms

Challenges

The client required a two level platform system that would provide access to their cooling towers. As the components could not be craned in, the only delivery option available was by the lift systems. An extremely short installation time was requested as the client wanted minimal on-site disruption. The myriad of existing pipework and structures where the system was to be installed was also a challenge that would require out of the box thinking to deliver structurally sound systems.

Solution

Planning and design for this project was key towards providing a system that would give the client ease of access to equipment, as well as no compromise on strength or integrity. KOMBI's modular design enabled easy delivery via lifts. On-site assembly and in situ customisation ensured the systems could be woven around existing pipework and structures. Within 24 hours, an intricately designed KOMBI system was installed, resulting in an extremely happy client who praised not only KOMBI's versatility but also its ability to provide such a high quality result.
